Paul Beaubien

Monday 8th of Sept., 2003

My name is Paul Beaubien. I am writing you to ask you for information on the Citizens' Assembly on Electoral Reform.

I am also writing you to offer you a model of an event registry I have built titled the Mathematics of Peace. The event registry is a neutral framework able to record and display all the election information in a systematic way. The geometric arrays central to the event registry can be set up as an electronic computer based data field or a paper based mapping process. The volumetric tangential element, number 1 through 25, of the geometric arrays shows a model for boundary delineation 100 as perimeter number values gives different volume totals dependant on the length width ratios.

I will explain my model to you in greater detail if you request it.

To me democracy,, elections, is about clarity in decisions. The volumetric tangential element(s) of the geometric array(s) sets up event registries that can election after election after election simplify the delineation of perspective lines that are viewed and reviewed before a decision is taken.

cheers from Paul Beaubien
